Each venture on its own

Oct 29, 2026 · @emlyn

With AI in every venture, a YouTube channel and sales funnel for each, and expansion from Kampala to the world, Soko Foods alone reaches USD 1 billion of lifetime revenue in about one run in five, and Formcraft in one in eight. In 2036 every venture is still close to its Kampala ceiling; the markets beyond are 10 to 100 times larger, so the limit for the next decade is execution, cash and people, not market size.

In 2036 every venture is still near its Kampala ceiling; the world is 10–100 times bigger

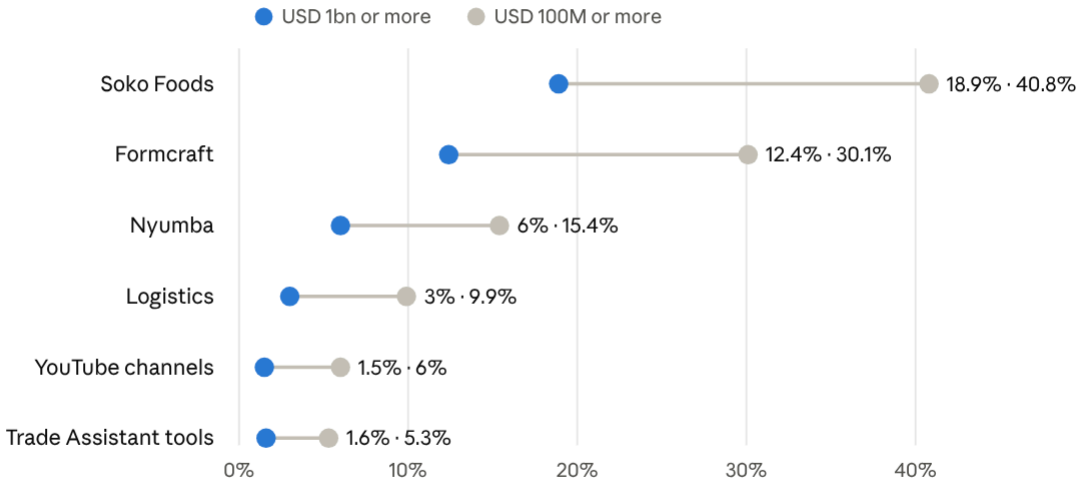

Yearly revenue, USD, log scale; dot = middle run in 2036; letters = estimated ceiling in Kampala, Uganda, East Africa, Africa, World

Middle and best runs from the simulation; ceilings are this profile's estimates from the market sizes in each section

Alone, Soko reaches USD 1bn in one run in five; Formcraft in one in eight

Chance each venture on its own earns this much by 2072, with AI, YouTube and global expansion

Each venture simulated alone with the scenarios tab's settings; AI help = 15% lower failure risk, 2 points faster growth

How to read each section. Results come from the full-plan simulation (400,000 runs), read venture by venture. Ceilings are the largest yearly revenue each market could plausibly support for one firm at each stage, from Kampala to the world, built from the market sizes cited; they are estimates. Touchpoints are the moments a customer meets the business. Every venture also gets a YouTube channel that feeds its AI-automated website.

Formcraft

Formcraft is the venture most likely to last, and the one whose ceiling is set by software rather than buildings. In the middle run it earns USD 2.8M in 2036; the best runs, where Formcraft Tools sell worldwide, pass USD 1 billion of lifetime revenue on their own (12% of runs).

Results alone.

- **Still open in 2036:** 55% of runs.
- **2036 revenue if open:** middle USD 2.8M; best 10% USD 6.4M. By 2041: middle USD 7.1M; best 10% USD 26M.
- **Lifetime revenue:** middle USD 15M; best 10% USD 1.6 billion.
- **USD 100M alone:** 30%. **USD 1 billion alone:** 12%.

Ceiling by stage (estimates). Uganda needs about 300,000 new homes a year and spends 14.6% of its budget on transport and infrastructure (US Commercial Guide).

- **Kampala, about USD 10M a year:** design-build, workshop and concrete for homes, rentals and clinics. Rivals: informal draughtsmen, local practices.
- **Uganda, about USD 30M:** public tenders, oil-region and upcountry projects. Rivals: established firms and large contractors.
- **East Africa, about USD 100M:** offices in Nairobi and Kigali; BIM drafting for regional firms. Rivals: Nairobi's bigger practices.
- **Africa, about USD 300M:** healthcare and school catalogues sold across the continent; BIM services for South African and West African firms.
- **World, USD 1 billion and up:** Formcraft Tools and BIM content sold to firms everywhere, competing with global plug-in makers and outsourcing firms; this is where software, not buildings, sets the ceiling.

What limits it.

1. **Registration.** Stamped drawings need registered architects and engineers, who are engaged per project until Emlyn or a partner qualifies.
2. **Cash for building.** Design-build needs working capital for materials while clients pay late.
3. **People.** Few staff can work to Formcraft's BIM standard; training takes years.
4. **Emlyn's time,** split across five ventures.
5. **Trust for big jobs.** Large clients and government want a track record and audited accounts.

Touchpoints, in the order a client meets them.

1. **Instagram, X, website and referrals:** the first impression; show finished work and process.
2. **First call or WhatsApp:** answered the same day, with a clear next step.
3. **Site visit and brief:** measured, photographed and written up within 48 hours.
4. **Proposal:** a fixed-price package, not a vague quote.
5. **Design reviews:** renders and walk-throughs the client can understand.
6. **Contract and deposit:** simple terms, staged payments.
7. **Workshop and site updates:** photos and progress on a client dashboard.
8. **Handover:** a building or furniture manual and warranty.
9. **Aftercare:** a check-in at 3 and 12 months, and the referral ask.

Who it competes with.

- **Informal draughtsmen and fundis:** cheapest, no coordination.
- **Established architecture practices:** reputation and registration.
- **Large contractors on big projects,** often foreign.

- **Furniture showrooms,** imported and local.
- **Overseas BIM outsourcing firms** for drafting work.

How to win.

- **Sell certainty:** BIM-coordinated drawings that build without surprises, fixed packages, published timelines.
- **Show the work:** renders, walk-throughs and live progress, which informal rivals cannot match.
- **Be fast:** AI tools turn drawings and quantities around in days, not weeks.
- **One roof:** design, workshop and build in one contract, one point of responsibility.
- **Specialise:** healthcare, schools, and rental blocks for landlords (a natural link to Nyumba).

YouTube channel and funnel. Formcraft's channel teaches BIM, Revit and AI-in-Revit to a global audience, and shows projects and furniture from sketch to handover. Education is the best-paid YouTube niche, with a median of about USD 10 per 1,000 views. Each video links to a free Revit family or template, then email, then paid Tools, templates and design inquiries through the AI-automated website.

Soko Foods

Soko Foods with its full plan is the strongest venture on its own. Some part of it is still running in 58% of runs in 2036, and it reaches USD 1 billion of lifetime revenue alone in 19% of runs, because food is a market that exists in every country it can reach.

Results alone (full plan).

- **Still running in 2036:** 58% of runs (any arm).
- **2036 revenue if running:** middle USD 7.1M; best 10% USD 29M. By 2041: middle USD 12M; best 10% USD 66M.
- **Lifetime revenue:** middle USD 34M; best 10% USD 3.8 billion.
- **USD 100M alone:** 41%. **USD 1 billion alone:** 19%.

Ceiling by stage (estimates). Uganda's smallholders grow about 5.6 million tonnes of grain a year, worth roughly USD 1.4–2 billion; school meals reach only about 1.2 million of 11.4 million learners.

- **Kampala, about USD 30M a year:** bulk shops, community buying, institutions in the city. Rivals: open markets, supermarkets.
- **Uganda, about USD 150M:** national grain buying, silos, schools and the army. Rivals: large traders and millers.

- **East Africa, about USD 600M:** cross-border grain to Kenya, South Sudan and Rwanda; franchise shops abroad. Rivals: regional grain houses.
- **Africa, about USD 2 billion:** food security contracts and franchise networks continent-wide.
- **World, USD 3 billion and up:** coffee, cocoa and vanilla exports from Soko plantations, competing with global commodity traders on traceability and quality.

What limits it.

1. **Working capital:** stock is cash sitting in a store.
2. **Margins of 2–8%:** revenue is large, profit is thin.
3. **Storage capacity and quality:** damp and aflatoxin destroy value.
4. **Prices and weather:** one bad season can wipe out a year.
5. **Tenders:** registration rules and slow government payment.
6. **Plantation lag:** Robusta takes 3–4 years to reach peak yield.

Touchpoints.

- **Farmers:** the buying point, an honest scale, payment on delivery by mobile money, price messages by SMS.
- **Community-buying members:** a WhatsApp group, the order, collection day.
- **Shoppers:** the bulk shop where they scoop and weigh any amount, online orders, delivery through the Logistics venture.
- **Institutions:** the tender, the delivery schedule, quality certificates, the invoice.
- **Plantation investors:** the plot agreement, quarterly reports, farm visits, payouts.

Who it competes with.

- **Farm-gate middlemen,** who buy cheaply at harvest.
- **Large grain traders and millers.**
- **Supermarkets and packaged-flour brands.**
- **Open markets,** on price.
- **Aid-agency and NGO buyers** for institutional supply.

How to win.

- **Pay farmers fairly and fast:** commercial buyers already pay about 8% more for quality maize than local traders; add honest scales and same-day mobile money.
- **Sell quality:** cleaned, dried, tested grain to East African grades.
- **Steady prices for members,** using the silos to buy at harvest.
- **Own the last mile** through the Logistics venture.
- **Forecast with AI:** prices, demand and stock levels.

- **Be the most reliable institutional supplier:** deliveries on schedule and menus planned with schools.

YouTube channel and funnel. Farm-to-table stories, grain-quality explainers, food-price updates, and plantation diaries for coffee, cocoa and vanilla that show investors their plots growing. Videos link to community-buying sign-up, the online shop, institutional supply inquiries and the plantation investor page.

Logistics

Logistics is easy to start and hard to scale. Some part of it is still running in 42% of runs in 2036, but the middle result then is about USD 0.4M a year; the big outcome needs the truck app to work in several cities, which happens in only a few runs (3% reach USD 1 billion).

Results alone.

- **Still running in 2036:** 42% of runs.
- **2036 revenue if running:** middle USD 0.4M; best 10% USD 2.7M. By 2041: middle USD 0.6M; best 10% USD 5.8M.
- **Lifetime revenue:** best 10% USD 98M.
- **USD 100M alone:** 10%. **USD 1 billion alone:** 3%.

Ceiling by stage (estimates). Uganda's logistics and warehousing market was about USD 1.24 billion in 2025, heading to USD 2.36 billion by 2032.

- **Kampala, about USD 5M a year:** e-boda business deliveries and truck booking for building sites. Rivals: SafeBoda, boda stages, truck brokers.
- **Uganda, about USD 12M:** upcountry routes for grain and building materials. Rivals: established carriers.
- **East Africa, about USD 60M:** the Northern Corridor to Kenya, Rwanda and South Sudan. Rivals: regional truck marketplaces and 3PLs.
- **Africa, about USD 250M:** the booking app in other African cities.
- **World, about USD 500M:** licensing the booking and dispatch software to operators elsewhere.

What limits it.

1. **Truck owners' trust:** they join only if they are paid fast and fairly.
2. **Cash-flow mismatch:** clients pay late, drivers want cash now.
3. **City rules on bodas** and the reach of battery-swap networks.
4. **Competition** from SafeBoda and informal brokers.
5. **Thin margins per trip.**

Touchpoints.

- **Business clients:** the booking (WhatsApp, then app), the rider's arrival in uniform with ID, the live tracking link, photo proof of delivery, the monthly invoice.
- **Riders and truck owners:** onboarding, the job offer, loading, and payout within 48 hours.

Who it competes with.

- **SafeBoda's business portal** for small deliveries.
- **Informal boda stages** and **truck brokers** at hardware shops.
- **Established logistics firms** for larger contracts.
- **Big companies' own fleets.**

How to win.

- **Own a niche:** building materials and bulk business deliveries, where SafeBoda is not built to serve.
- **Guaranteed time windows,** with a refund if missed.
- **Pay drivers within 48 hours,** never before the client pays.
- **Plug into the family:** Formcraft and Soko orders book trucks automatically.
- **Transparent prices** shown before booking.
- **Lower cost per kilometre** with electric bikes.

YouTube channel and funnel. A day on the road with riders and trucks, construction-logistics tips, and the real economics of electric bodas. Videos link to business sign-up and the booking app; rider and truck-owner recruitment runs through the same channel.

Nyumba

Nyumba is a strong business where it launches, and most African cities are majority-renter, so it can travel. Where it is running in 2036 (29% of runs), the middle result is USD 3.5M a year; it reaches USD 100M of lifetime revenue in 15% of runs. These figures include the USD 5 landlord connection fee.

Results alone.

- **Still running in 2036:** 29% of runs.
- **2036 revenue if running:** middle USD 3.5M; best 10% USD 11M. By 2041: middle USD 6.6M; best 10% USD 30M.
- **Lifetime revenue:** best 10% USD 318M.
- **USD 100M alone:** 15%. **USD 1 billion alone:** 6%.

Ceiling by stage (estimates). About 71% of Kampala households rent; the common single room rents for about USD 40 a month, and the fastest-moving homes for USD 70–200.

- **Kampala, about USD 10M a year:** a quarter of about 700,000 renting households at about USD 60 a year in fees. Rivals: brokers, Rentify, Facebook groups.
- **Uganda, about USD 15M:** Entebbe, Mukono, Jinja, Mbarara, Gulu.
- **East Africa, about USD 60M:** Nairobi, where more than 80% rent, plus Kigali and Dar es Salaam. Rivals: established Kenyan listing sites.
- **Africa, about USD 300M:** Lagos, Accra, Abidjan, where most city households rent.
- **World, about USD 400M:** management services for African diaspora landlords living abroad.

What limits it.

1. **Landlord adoption:** without listings there is nothing to rent.
2. **Brokers,** who lose income and push back.
3. **Trust and fraud:** fake listings and deposit theft.
4. **Payment rules** for collecting rent.
5. **Low rents,** which keep each fee small.

Touchpoints.

- **Tenants:** the search, verified photos, booking a viewing, the unlock fee, move-in with the Rent Passport and condition record, rent reminders, repairs, move-out and deposit return.
- **Landlords:** onboarding with the USD 5 connection fee, the listing, tenant screening, rent collection, and monthly reports for landlords abroad.

Who it competes with.

- **Brokers and commission agents.**
- **Rental apps** such as Rentify.
- **Facebook groups and classifieds.**
- **Property managers** for larger blocks.

How to win.

- **No broker fee for tenants,** and listings verified in person.
- **The Rent Passport:** a good-tenant record that follows the tenant.
- **A fee landlords barely notice:** USD 5 per connection.
- **Fast repairs** through vetted fundis.
- **A dashboard for landlords abroad.**

- **Moving day** booked through the Logistics venture, and new rental blocks designed by Formcraft.

YouTube channel and funnel. Neighbourhood tours, honest renting guides for Kampala and later Nairobi, landlord tips, and a series for landlords abroad. Videos link straight to verified listings, landlord sign-up with the USD 5 connection fee, and diaspora management plans.

Trade Assistant

Sold as tools to traders worldwide, the Trade Assistant is a small, global business. It is running in 19% of runs in 2036, earning a middle USD 0.8M that year; its real value is skill, credibility, side income and the content it gives the YouTube channel.

Results alone (tools sold from 2028).

- **A business in 2036:** 19% of runs.
- **2036 revenue if running:** middle USD 0.8M; best 10% USD 2.6M. By 2041: middle USD 1.3M; best 10% USD 6M.
- **USD 100M alone:** 5%. **USD 1 billion alone:** 1.6%.

Ceiling: about USD 10M a year, sold worldwide from day one (estimate). On MetaTrader's marketplace, the best sellers earn over USD 10,000 a month among more than 10,000 registered sellers, and the retail prop-trading industry is about USD 850M a year. The market is global, so there are no local stages: it competes with every seller worldwide from the start.

What limits it.

1. **Trust:** the market is full of exaggerated claims.
2. **Crowding:** thousands of sellers.
3. **Platform dependence** on MetaQuotes and prop-firm rules.
4. **Edge decay:** strategies stop working.
5. **Regulation** of trading products in some countries.

Touchpoints.

- **The product page** with honest test results.
- **A free demo** or trial.
- **Purchase and setup.**
- **Updates, support and a user community.**
- **Refunds,** handled fairly.

Who it competes with.

- **Thousands of marketplace sellers** of indicators and expert advisors.
- **Prop firms' own dashboards and tools.**
- **Charting platforms' script libraries.**

How to win.

- **Make honesty the product:** publish sealed-data tests and random-entry baselines that rivals do not show.
- **Sell protection, not profits:** a rule checker that stops traders breaking prop-challenge rules.
- **Teach:** the Replay Trainer as paid education.
- **Subscriptions** rather than one-off sales.

YouTube channel and funnel. Honest strategy tests, live forward-test diaries and prop-rule explainers, with no profit promises. Finance pays well per view but needs careful disclosure. Videos link to a free tool, then the subscription.

YouTube channels

The five channels are worth far more as a sales engine than as income. Their own revenue reaches a middle USD 0.2M a year by 2036 (best 10%: USD 0.9M), but the visibility they bring adds 11 points to the lifetime billion odds, against 1 point from the ad money.

Results.

- **Still active in 2036:** 36% of runs (most channels stop within a few years; consistency is the whole game).
- **Yearly income if active:** 2031 middle USD 61k; 2036 middle USD 213k; 2041 middle USD 459k, best 10% USD 2.6M.
- **Lifetime income:** best 10% USD 35M.

What the record says. The top 10% of channels take 58% of all ad revenue, only about 4.3% of creators make more than USD 100,000 a year, and Education pays a median of about USD 10 per 1,000 views against about USD 2 for business and finance. Content marketing produces leads at about 62% lower cost than outbound selling.

Ceiling by stage (estimates). Kampala and Uganda audiences earn little per view: about USD 0.2–0.5M a year for all channels. East Africa and Africa, about USD 1–3M. A global audience, mainly for Formcraft's BIM education and the trading tools, could reach USD 10M a year with sponsorships and courses.

What limits it. Consistency (most channels stop), low ad rates for African audiences, Emlyn's time on camera, and finance-content rules for the trading channel.

How to win. Film the real work, not ads; publish on a fixed weekly schedule; let AI handle editing, captions, translation and thumbnails; and make every video end in one clear next step on the website.
